Developer Advocate Closeout Report - Q2 2026

Summary

This report documents **Q2 2026 deliverables progress** demonstrated by the four Developer Advocates, as defined in their Consultant Services Agreements. Deliverables executed during the quarter align with individual and collaborative goals covering developer experience, onboarding, documentation, community engagement, strategic collaboration, and ecosystem growth. **50+ deliverables were tracked**, including individual contributions from each Developer Advocate and collaborative milestones.

Details regarding milestone progress and deliverables can be found on the publicly available GitHub dashboard GitHub.com/IntersectMBO/OpenSourceOffice under the Developer Advocate Program (Project 71). Technical contributions, documentation, working group resources, and supporting materials can be found in the Developer Experience repository and on the DevEx website

Milestone 1: Developer Experience Working Group

Description: Participate in and/or lead the Developer Experience Working Group, including establishing meeting cadence, seeking participation, providing regular updates to the Open Source Committee, tracking developer experience pain points, and producing shared documentation for OSC review. Includes creation of draft documentation for Core Cardano repositories.

Dan

Evidences: Developer Experience Working Group: Issue #17 | DevEx WG Leadership & OSC Reporting Q2 2026

Dan participated in leading the Developer Experience Working Group during Q2, including sessions about UI & Smart Contracts, specifically looking at Wallets, Transaction building and Submission. Dan also hosted a working group session focused on the Developer Environment for Cardano. Updates to the OSC continued on a 2-4 week cadence. He also maintained reporting on Developer Experience priorities and contributed to the coordination and documentation of the Working Group's Q2 activities.

Emmanuel

Evidences: Developer Experience Working Group: Issue #19 | DevEx WG Session 15: dApp Architecture Demo | DevEx WG Session 18: Cardano MCP Server

Emmanuel led 2 documented Developer Experience Working Group sessions during Q2 2026: Session 15 on dApp architecture and Session 18 on the Cardano MCP Server. These sessions contributed to the DevEx WG cadence through technical demonstrations and developer discussions around Cardano development architecture and tooling.

Harun

Evidences: Developer Experience Working Group: Issue #20 | DevEx WG Session 14: Offchain and SDK Building | DevEx WG Session 18: Using AI in Your Cardano Dev Workflow | DevEx WG Session 21: Building a Production Cardano SDK | Q2 DevEx WG Sessions Report

Harun led or co-led three documented Developer Experience Working Group sessions during Q2 2026: Session 14 on off-chain and SDK development, Session 18 on AI-assisted Cardano development workflows, and Session 21 on building a production Cardano SDK. These sessions featured technical walkthroughs, demonstrations, and supporting documentation published on the DevEx portal, contributing to the Working Group's ongoing technical discussions and session cadence.

Uche

Evidences: Developer Experience Working Group: Issue #18 | DevEx Working Group Sessions Q2 2026

Uche continued leading Developer Experience Working Group activities during Q2, maintaining the meeting cadence by facilitating discussions, technical demonstrations, and community knowledge sharing. His sessions addressed developer tooling accessibility and newcomer onboarding, including practical local development workflows.

Milestone 2: Onboarding New Developers

Description: Connect with developers from the community, encourage participation in Developer Experience and Technical Working Groups, onboard developers into Core Cardano initiatives, and maintain Cardano specific documentation within the Developer Experience repository under the IntersectMBO GitHub organization.

Dan

Evidences: Onboarding New Developers: Issue #22 | evolution-sdk PR #378 | developer-experience PR #248

Dan documented onboarding activities involving 5 developers during Q2 through 1 to 1 mentorship, DevEx Working Group sessions, and contribution support. His activities covered open source contribution pathways, Aiken transition support, UI contribution mentorship, and guidance for developers getting started on Cardano. Documented outcomes included contributions from onboarded developers to `evolution-sdk` through PR #378 and the `developer-experience` repository through PR #248.

Emmanuel

Evidence: Q2 Onboarding and Meetings

Emmanuel documented onboarding engagement with Emmanuel Mutisya as an active community contributor and workshop facilitator. He also engaged prospective contributor Maluku Gauthier through 2 dedicated calls focused on contribution pathways and opportunities within Intersect repositories, establishing continued engagement around open source contribution.

Harun

Evidences: Onboarding New Developers: Issue #23 | Q2 2026 Developer Onboarding Report

Harun conducted ongoing developer outreach through Q2 DevEx Working Group sessions, helping new participants discover and join the sessions. Evidence from one session documents four newly onboarded participants, alongside additional outreach during the quarter. He also published technical documentation and learning materials providing practical onboarding paths into Cardano development.

Uche

Evidences: Onboarding New Developers: Issue #24 | Q2 2026 Onboarding Report

Uche documented the onboarding of 4 developers during the Developer Advocates Satellite Event in Lisbon on May 19, 2026. Through hands-on workshops, participants were guided through setting up local Cardano development environments and using the Local Cardano Payment Detector tutorial. They were also introduced to Intersect, the DevEx Working Group, and available contribution pathways, with follow up guidance provided to support continued engagement.

Milestone 3: Meetings

Description: Establish and maintain meeting cadence for Developer Experience Working Group activities and 1 to 1 meetings as required. Make availability clear for onboarding and support conversations across GitHub, Discord, Slack, and other approved channels. Maintain records of meetings attended and aim to hold at least 2 conversations per quarter with new developers to support their onboarding into OSO, OSC, or the Cardano ecosystem.

Dan

Evidences: Meetings: Issue #27 | Meeting Tracking Sheet

Dan documented 5 developer onboarding and mentorship conversations during Q2. The sessions covered Catalyst proposal preparation and technical feasibility, open source contribution pathways and community tooling, Aiken development, UI contribution progress, and guidance for developers starting on Cardano. These activities were recorded in the Developer Advocate Meeting Tracker and reported through the Developer Advocate Program.

Emmanuel

Evidence: Meetings: Issue #28

During Q2, Emmanuel documented direct engagement with 2 Nairobi based developers, Maluku Gauthier and Emmanuel Mutisya, through Cardano Hub Nairobi meetups and follow up conversations. The discussions focused on Cardano development, open source contribution, and deeper participation in Intersect, with Emmanuel Mutisya also progressing toward becoming a regular speaker at the monthly meetups.

Emmanuel additionally engaged with ADA Sisters regarding potential collaboration with Intersect, documented separately through the ADA Sisters collaboration report.

Harun

Evidences: Meetings: Issue #25 | Q2 2026 Meetings Report

Harun maintained the DevEx Working Group cadence through three led or co-led technical sessions. He also completed two documented onboarding conversations with new developers, providing mentorship and creating pathways into Cardano development and open-source participation.

Uche

Evidences: Meetings: Issue #26 | Q2 2026 Meetings Report | DevEx Working Group Session Recording

Uche maintained his Q2 meeting and engagement activities through Developer Experience Working Group sessions and direct community engagement. His evidence includes a recorded DevEx Working Group session and the Developer Advocates Satellite Event in Lisbon, attended by 5 participants. The meeting report also documents his role in maintaining the DevEx Working Group meeting cadence and facilitating developer discussions during the quarter.

Milestone 4: Community Engagement

Description: Attend a minimum of 2 Web3 events per quarter to support and improve the developer experience and/or contribute to OSO Project Support Services. Following participation, prepare a written report or article for Intersect review. Virtual and in person events are eligible.

Dan

Evidences: Community Engagement: Issue #31 | Web3 Events Q2 2026 Report

Dan documented participation in 2 Web3 events during Q2 2026: the Open Source Summit North America, where he participated virtually with a Yaci DevKit demonstration, and the Safrochain Community Call, focused on real world financial use cases and builder feedback. He subsequently documented his participation and observations in a published Q2 Web3 events report.

Emmanuel

Evidence: Q2 Events and Workshops Report

During Q2, Emmanuel documented 3 community focused activities: the Cardano Hub Nairobi Monthly Meetup, a live streamed Cardano Node Setup workshop connected to the Open Source Summit in Minnesota, and technical integration support at the Kenya AI Challenge. The activities covered practical Cardano learning, community led technical sessions, and engagement with developers outside the traditional blockchain community.

Harun

Evidences: Community Engagement: Issue #29 | Web3 Community Events (Q2 2026)

Harun attended both days of the Kenya Blockchain & Crypto Conference and a separate VALR meetup at Nairobi Street Kitchen. The events provided exposure to stablecoin and M-Pesa integrations and opportunities to introduce Cardano and Intersect to new contacts, including VALR Kenya Country Manager Peter Mwangi.

Uche

Evidences: Community Engagement: Issue #30 | Community Engagement Report Q2 2026

Uche documented his Q2 community engagement activities through a dedicated report submitted under the Developer Advocate Program. The report provides a record of his Web3 event participation and related developer engagement activities during the quarter.

Milestone 5: Feedback and Improvement

Description: Design, revise, or improve feedback collection tools related to developer experience, beginning with revision of the 2024 State of Developer Experience Survey, including refinement of questions and differentiation from other ecosystem surveys.

Evidence: Q2 Shared DevEx Report

Collective Commentary: The Developer Advocates documented findings from the 2026 State of Developer Experience Survey, which collected 55 responses, alongside observations from Q2 Working Group sessions and community activities. The findings highlighted developer experience challenges across onboarding, documentation, debugging, tooling, funding opportunities, community visibility, and language accessibility, providing a structured feedback base for continued DevEx work.

Each developer advocate also hosted feedback sessions with various groups. Each feedback session led to marginal improvement of issues already identified as well bringing to light missing pieces. Emmanuel and Harun hosted sessions with other projects and organizations within the Cardano ecosystem addressing real gaps in current documentation and sourcing opportunities for external organizations to provide additional support.

Milestone 6: Developer Experience Repository Contributions

Description: Collect and log 10 pieces of feedback from developers on repository usability. Publish a quarterly DevEx changelog showing updates and areas needing improvement.

Evidence: Developer Experience Q2 Changelog

Collective Commentary: Q2 additions covered resources related to SDK and off-chain architecture, dApp development, wallet integration, Yaci DevKit, Blaze SDK, Cardano node emulation, and the Cardano MCP Server.

Dan

Evidence: Developer Experience Repo Q2 – Issue #48

Dan submitted Q2 evidence documenting **8 merged PRs** to the developer-experience repo and **10 logged pieces of developer feedback** on repository usability. The feedback covered onboarding, resource discoverability, contribution pathways, documentation quality, SDK selection, repository fragmentation, local first setup, and practical development flows.

Emmanuel

Evidence: Developer Experience Repo Q2 – Issue #50

Emmanuel submitted **5 merged PRs** to the Developer Experience repository during Q2. His contributions covered documentation for the Cardano MCP Server, developer contribution pathways, documentation fixes, and DevEx Working Group session resources, including the dApp architecture and Cardano MCP Server sessions.

Harun

Evidence: Developer Experience Repo Q2 – Issue #49 | Q2 Developer Experience Repository Contributions Report

Harun submitted **4 PRs** to the Developer Experience repository during Q2, covering the Q2 session structure, Session 14 documentation, and production Cardano SDK session materials. All three were ultimately merged. A later follow up PR restored Session 18 and aligned the Q2 session numbering, changelog, blog references, and redirects.

Uche

Evidence: Developer Experience Repo Q2 – Issue #47

Uche submitted **3 PRs** to the Developer Experience repository during Q2 : #183, #234, and #207 focused on session notes and related information.

Milestone 7: Deepen Strategic Collaborations

Description: Document outcomes in a Strategic Collaboration Log (who was contacted, response, next steps).

Dan

Evidences: Strategic Collaboration Q2: Issue #59 | Strategic Collaboration Log Q2 2026 | Blaze SDK + Yaci Store Integration: PR #186 | Published Blaze + Yaci Store Integration Guide

Dan documented 2 strategic collaboration streams during Q2. The first connected the Blaze SDK and Yaci Store/Yaci DevKit teams and resulted in a jointly reviewed integration guide merged into the Developer Experience repository. The second involved WADA and Zedeal Group Hub Ltd around a Technical Support and Mentorship Program for projects emerging from African developer hubs. The Strategic Collaboration Log records the organizations involved, responses, outcomes, status, and next steps.

Emmanuel

Evidences: Collaboration Facilitation Report Q2 2026 | ADA Sisters: Involvement & Collaboration with Intersect

Emmanuel documented continued collaboration between Intersect OSO and Cardano Hub Nairobi, supporting recurring community meetups, community led technical sessions, and pathways toward open source contribution. He also documented a proposed strategic collaboration between ADA Sisters and Intersect aimed at creating pathways for African women to participate in Cardano and Midnight development, open source contribution, and governance. The proposal identifies next steps including engagement with Intersect leadership, participation in working groups and OSC activities, and initial collaborative events.

Harun

Evidences: Strategic Collaboration Q2: Issue #56 | Q2 2026 Strategic Collaborations Report

Harun documented 3 strategic collaboration efforts: the completed Scalus Project Spotlight, deferred Project Spotlight outreach to Hydrozoa, and an introduction between Tx Meta and Eburnie Labs. The Tx Meta–Eburnie Labs collaboration is progressing toward an agreement covering Cardano training and distribution using the DCU Toolkit and Kyama.

Uche

Evidences: Strategic Collaboration Q2: Issue #58

Uche documented outreach efforts to existing communities in Lisbon during Q2 2026, noting that these efforts did not lead to successful engagement.

Milestone 8: Implement Diversity & Inclusion Programs

Description: Draft a D&I onboarding guide tailored for underrepresented groups. This can also be achieved by reviewing and enhancing the Hitchhiker's Guide and other related documents. Host 1 regional or language specific workshop per quarter.

Dan

Evidence: Implement Diversity & Inclusion Programs Q2

Dan hosted a French language workshop on Cardano smart contracts and AI for Francophone developers on June 6, 2026. The online session combined practical examples with an open Q&A and attracted 46 registrations. Dan also delivered a language-inclusive onboarding guide published to the developer-experience repository.

Emmanuel

Evidences: Onboarding Guide: Issue #79 | Core Protocol Contributor Guide | ADA Sisters Collaboration

Emmanuel supported diversity and inclusion through the ADA Sisters initiative, documenting pathways for African women to participate in Cardano and Midnight development, open source contribution, working groups, and governance.

Emmanuel also documented the Core Protocol Contributor Guide as his Q2 contribution under the D&I onboarding guide task. The guide provides a structured entry point into Core Cardano development, directing prospective contributors through the Cardano Blueprint, dedicated Haskell, Rust, and Go contribution pathways, shared protocol resources, and opportunities to participate in protocol development and technical working groups.

Harun

Evidences: D&I Workshop Q2: Issue #68 | Regional Workshop Report | Onboarding Guide

Harun co-organised a regional technical workshop for the Open Source Summit North America audience with the Developer Advocate cohort. The hybrid workshop covered local Cardano development with Yaci DevKit, running a Preview relay node, and block-producing node fundamentals. Additionally a fully drafted onboarding guide for the developer-experience repository was shared on the documentation (DA-Milestones) branch.

Uche

Evidences: D&I Workshop Q2: Issue #70 | Q2 IRL Event Report | Onboarding PR

Uche documented the Developer Advocates OSS Satellite Event held in Lisbon on May 19, 2026 as his regional workshop contribution. The event documented 4 developers onboarded, and connected the local group with the wider Open Source Summit community. Uche also submitted a PR towards the developer portal, maintained by the Cardano Foundation, to provide missing information about a key resource for some developers.

Milestone 9: Expand Ecosystem with New Projects

Description: Publish step-by-step build guides for newcomers starting projects on Cardano. (Can also be achieved by improving currently available resources eg: Dev Portal)

Dan

Evidences: Newcomer/Build Guide: Issue #88 | UI ↔ Smart Contract Interaction: Session Notes | Cardano Demo Wallet Dashboard

Dan published a step by step DevEx resource covering UI to smart contract interaction, including wallet connection, transaction building, signing, submission, architecture options, and common implementation pitfalls. The resource was accompanied by an open source demo project providing newcomers with a practical reference for Cardano frontend and wallet integration.

Emmanuel

Evidences: Newcomer/Build Guide: Issue #90 | Developer Experience: Issue #201 | Core Protocol Contributor Guide

Emmanuel took ownership of Developer Experience Issue #201 and delivered a Core Protocol Contributor Guide for developers seeking to contribute to Cardano's core protocol. The published resource provides a dedicated contributor pathway and practical guidance for developers entering Core Cardano development.

Harun

Evidences: Newcomer/Build Guide: Issue #89 | Q2 DevEx WG Sessions Report

Harun submitted technical walkthroughs covering off-chain SDK development in Session 14 and the path from Cardano validators to a dApp in Session 21. The sessions include documentation, recordings, and supporting resources published on the DevEx portal, providing practical technical guidance for developers building Cardano projects.

Uche

Evidences: Newcomer/Build Guide: Issue #87 | Newcomer Guide Q2 2026

Uche developed a step by step newcomer guide for the Cardano Build Emulator and contributed it directly to the Cardano Developer Portal through PR #1796. The guide walks developers through emulator setup and usage, providing a practical environment for experimenting with Cardano development before deploying on chain.

Milestone 10: Foster Innovation & Technology Advancement

Description: Facilitate 1 feedback session with core contributors to test potential innovations.(Achievable with assistance from OSO/OSC)

Dan

Evidences: Feedback Session: Issue #109 | Tech Experiment/Demo Q2: Issue #99 | Developer Experience Pain Points and Solutions Q2 2026

Dan facilitated a feedback session with core `cardano-api` contributors to explore improvements to the repository README and developer onboarding experience. The session focused on README structure, quick start guidance, setup clarity, and usage examples, with the resulting feedback documented in `cardano-api` Issue #1220 for core contributor review.

Dan also ran a technical experiment and demonstration during DevEx WG Session 16 focused on UI to smart contract interaction. The demonstration was extended into a working vesting smart contract implementation with wallet dashboard integration, including Koios datum fetching and frontend interaction, providing a practical test of the development workflow presented during the session.

Dan documented 3 developer experience pain points: fragmented onboarding, documentation inconsistency and staleness, and tooling and SDK choice paralysis. Each pain point was supported by evidence and impact analysis and paired with proposed solutions for the Developer Experience Working Group.

Emmanuel

Evidences: Innovation & Technology Advancement Q2 2026 | DevEx WG Session 19: Cardano MCP Server | DevEx WG Session 15: dApp Architecture Demo

Emmanuel facilitated 1 feedback session with WIMS Cardano founder Bernard Sibanda on June 26, 2026, exploring potential collaboration between WIMS Cardano and ADA Sisters. The discussion examined how WIMS Cardano's community model and experience could support the development of a women focused Cardano developer community in Nairobi, with a follow up involving WIMS and the ADA Sisters team identified as the next step.

Emmanuel reported running 3 technical demos during Q2 2026: the Cardano MCP Server during DevEx WG Session 18, a dApp architecture demonstration during Session 15, and a Cardano node setup during the Open Source Summit virtual call. Published recordings document the Session 15 and Session 19 demonstrations.

Emmanuel contributed to the shared Q2 DevEx work documenting developer experience pain points identified through developer feedback and Working Group participation. The findings were consolidated into the shared Q2 report.

Harun

Evidences: Feedback Session: Issue #107 | Q2 2026 Feedback Session Report | Q2 Technical Experiment Report | Q2 2026 Pain Points Report

Harun facilitated a technical feedback session with Scalus founders and core contributors Alexander Nemish and Oleksii Khodakivskyi. The session covered Scalus tooling, testing, profiling, debugging, interoperability, onboarding, security, and roadmap considerations, and identified a potential follow-up demonstration for testing Aiken contracts through Scalus.

Harun delivered a live technical experiment during DevEx WG Session 21 using the DCU Toolkit and Kyama demo web application. The walkthrough connected Aiken validators, a typed TypeScript SDK, CLI examples, Lace wallets, and a working interface on Cardano Preprod, including account and savings circle creation and joining from a second wallet.

Harun documented 5 developer experience pain points identified through DevEx WG Sessions 14, 18, and 21. The findings covered the gap between validators and complete applications, version-sensitive tooling, limited Cardano context in AI tools, missing production SDK patterns, and limited end-to-end testing examples, with proposed improvements and links to the relevant session notes.

Uche

Evidences: Feedback Session: Issue #110 | Q2 Tech Experiment/Demo Report | Local Cardano Payment Detector Tutorial

Uche facilitated a feedback session during a Developer Experience session, where a community member reported issues with the DevEx website. He also delivered a hands-on technical demo on May 19, 2026, demonstrating how to build a Local Cardano Payment Detector using a Cardano emulator environment. The workshop covered address generation, UTxO monitoring, transaction parsing, and payment detection, with participants running the demo locally. The experiment was supported by a reusable step by step tutorial published on the Developer Experience portal.

Collective Evidence

Q2 Shared DevEx Report

Collective Commentary

The Developer Advocates consolidated Q2 developer feedback into documented pain points and proposed solutions across debugging, documentation, onboarding, tooling, funding and opportunities, community and Intersect visibility, and language access. Proposed improvements included an offline development environment, a canonical documentation entry point, tailored developer learning paths, improved contribution guidance, better visibility of funding opportunities, developer focused Intersect outreach, and expanded multilingual resources.

Milestone 11: Build a Global Community

Description: Organize 1 community event per quarter, IRL or virtual. Translate and distribute 1 educational resource in a local language

Dan

Evidence: IRL/Community Event Q2: Issue #121 | Educational Resource Translation: Issue #127 | French Yaci Store 3.0.0 Analytics Store Article

Dan organized and hosted the French language “Cardano Smart Contracts with AI” virtual workshop on June 6, 2026. The session attracted 46 registrations and provided Francophone developers with practical insights into Cardano smart contracts and the use of AI to support their design, understanding, and development. Dan translated and published an educational resource on Yaci Store 3.0.0 Analytics Store in French, making technical guidance on exporting and querying Cardano chain data more accessible to French speaking developers.

Emmanuel

Evidence: Q2 Events and Workshops Report | Educational Resource Translation: Issue #129 | Rust Core Contributor Guide | Haskell Core Contributor Guide | Core Protocol Contributor Guide

Emmanuel documented his Q2 community engagement across Nairobi and beyond, including local developer meetups, technical workshops, and participation in the Kenya AI Challenge. His activities also included a live streamed Cardano node setup workshop, extending technical engagement beyond the local community. Emmanuel documented these Q2 educational resources under Educational Resource Translation Issue #129: the Rust Core Contributor Guide, Haskell Core Contributor Guide, and broader Core Protocol Contributor Guide. The resources provide structured guidance on development environments, contribution pathways, relevant repositories, and technical resources for developers entering Core Cardano development.

Harun

Evidences: IRL/Community Event Q2: Issue #119 | Q2 2026 Community Event Report | Educational Resource Translation: Issue #130 | Published Educational Resources Report

Harun co-organised and presented a live Developer Advocate satellite workshop for Open Source Summit North America on May 19, 2026. The session covered running and verifying a Cardano Preview relay node using Docker, including relay and block-producing node roles, with attendees connected to continued support through the DevEx Working Group and Developer Advocate one-on-one sessions. Harun also published and distributed educational resources covering 3 Q2 Developer Experience Working Group sessions. The materials covered off-chain SDK development, responsible use of AI in Cardano development, and the path from validators to a production SDK and integrated application.

Uche

Evidences: IRL/Community Event Q2: Issue #122 | Developer Advocates OSS Satellite Event Report | Educational Resource Translation: Issue #128 | Cardano Developer Portal PR #1796 | Local Cardano Payment Detector Tutorial

Uche organized and facilitated the Developer Advocates OSS Satellite Event in Lisbon on May 19, 2026, bringing together 5 in person participants and connecting them with the wider community through an online bridge to the Open Source Summit. The event combined local community engagement with hands-on Cardano technical workshops. Uche submitted educational resources during Q2 2026, including a contribution to the Cardano Developer Portal and a tutorial on building a local Cardano payment detector.

Conclusion

Q2 2026 reflects continued activity across the Developer Advocate Program, with contributions spanning technical documentation, developer onboarding, Working Group activities, community engagement, strategic collaboration, diversity and inclusion initiatives, and practical technical experimentation.

The quarter also illustrates how different areas of Developer Advocacy connected across the program. Working Group discussions informed technical resources, onboarding activities introduced developers to contribution pathways, community initiatives expanded engagement across different audiences and regions, and developer feedback identified areas for continued improvement.

The work documented throughout this report provides a record of Q2 activity and a foundation for continued developer engagement, documentation improvements, technical collaboration, and open source participation in subsequent quarters.

A Word from the Program Administrator

Q2 marked the close of the second cohort of the Developer Advocate Program, and with it came a number of valuable lessons for the Open Source Office (OSO) and Open Source Committee (OSC). Our developer advocates stayed consistently engaged throughout the quarter. They hosted working group sessions, pushed updates to the website, and built connections with developers and organizations across the ecosystem.

Working with advocates embedded at the grassroots level of Cardano has been eye-opening. It has given us a clearer picture of where builders are thriving, where support falls short, and where the gap lies between participation and meaningful contribution.

On the administrative side, we learned that the milestone-based contract used language that was too vague for every milestone to be clearly met. The workload itself was appropriate, but building strong habits takes time, and not every milestone landed the way we had hoped. We want to be transparent about that. Even so, this cohort made real progress and connected more of the Cardano community with its developer roots.

We see this program as iterative, and we’re choosing progress over perfection. The OSO welcomes comments and questions from the community on how to improve this program and the broader developer experience across Cardano.
